

GA-235-2019 GYPSUM BOARD TYPICAL MECHANICAL AND PHYSICAL PROPERTIES

The properties described herein were either obtained from laboratory tests conducted under controlled test conditions as set forth in appropriate standards, compiled from manufacturers' literature, or taken from the minimum requirements of appropriate ASTM Standard Specifications. The values reported below are provided for information and convenience only. Consult manufacturer for more specific values.

Effective Stiffness (EI)*						
	(typical range)					
Board Thickness in. (mm) Ib•in²/in of width kN•mm²/mm of width						
1/2 (12.7)	1500 to 4000	220 to 580				
5/8 (15.9)	3000 to 8000	440 to 1160				

^{*} El is dependent on board density, relative humidity, type of board, paper type, direction of board during testing and the amount of handling prior to measurement. In general the value of EI follows the following relationships:

Type X Gypsum Board > Regular Gypsum Board Denser Gypsum Board > Less Dense Gypsum Board Machine Direction > Cross Direction Low Relative Humidity > High Relative Humidity

Compressive Strength (typical)

Ultimate compressive strength at $70^{\circ}F$ ($21^{\circ}C$) and 50% Relative Humidity (RH) Determinations were made from 2" x 2" (50 x 50 mm) or 4" x 4" (100 x 100 mm) samples cut from across the full board width (excluding taper). Samples were conditioned for a minimum of 24 hours and tested in compressive strength machines. Load was applied at a uniform rate until the end point was reached.
